

Regulating Our Future: Putting theory into practice

21st May 2019

David Pickering

Buckinghamshire and Surrey Team Manager

CTSI Food Lead Officer

Where are we?

What we hope will happen

What we don't want to happen

What we hope will happen

Raise the profile of food standards

Produce a risk scheme that enables effective compliance in the supply chain

Enable more capacity to do the work

Recognise the potential for national/local targeting

Engage and work better with the national regulators

Place responsibility for food standards with the FSA

Develop effective outcome based performance indicators

Improve food standards sampling effectiveness

Have an effectively funded Public Analyst service

Flexibility so system is as future proof as it can be

What we don't want to happen

TS and EH professions fail to buy into RoF process

LA funding continues to fall

Post Brexit landscape uncertainty diverts resources

The internet and new supply channels divert regulatory resources

New food products fall through legislative gaps

We are unable to resource national coordination on food standards issues

Thank you
